

**DEPARTMENT OF ENTOMOLOGY
COLLEGE OF AGRICULTURE, JODHPUR
(AGRICULTURE UNIVERSITY, JODHPUR)**

S. No.	Course Numbers	Course Titles	Credit Load
GRADUATE PROGRAMME:			
1.	ENTO-121	Fundamentals of Entomology	4(3+1)
2.	ENTO-221 [§]	Bio pesticides and bio fertilizer [§] (Elective course)	3(2+1)
3.	ENTO-311	Pests of crops and stored grain and their management	3(2+1)
4.	ENTO-321	Management of beneficial insects	2(1+1)
5.	ENTO-322 [§]	Agrochemicals (Elective course)	3(2+1)
6.	ENTO-421	Commercial Beekeeping (Student Ready- choice based)	0+10
7.	ENTO-422	Commercial Sericulture (Student Ready- choice based)	0+10
MASTER'S PROGRAMME:			
SEMESTER-I			
1.	ENTO 511**	INSECT MORPHOLOGY AND ANATOMY	3 (2 + 1)
2.	ENTO 512*	INSECT ECOLOGY	3 (2 + 1)
3.	ENTO 513**	PRINCIPLES OF INTEGRATED PEST MANAGEMENT	3 (2 + 1)
SEMESTER-II			
4.	ENTO 521**	INSECT TAXONOMY AND CLASSIFICATION	3 (2 + 1)
5.	ENTO 522**	INSECT PHYSIOLOGY AND NUTRITION	3 (2 + 1)
6.	ENTO 523*	TOXICOLOGY OF INSECTICIDES	3 (2 + 1)
7.	ENTO 524*	PESTS OF FIELD CROPS, STORED GRAINS AND THEIR MANAGEMENT	3 (2 + 1)
SEMESTER-III			
8.	ENTO 531*	PESTS OF HORTICULTURAL AND PLANTATION CROPS	3 (2 + 1)
9.	ENTO 532*	BIOLOGICAL CONTROL OF CROP PESTS AND WEEDS	3 (2 + 1)
SEMESTER-IV			
10.	ENTO 541	MASTER'S SEMINAR	01
11.	ENTO 542	COMPREHENSIVE	Non-credit
12.	ENTO 543	MASTER'S RESEARCH	20

[§]course shall be shared with faculty of Soil Science

* refers to Compulsory Courses; ** refers to Core Courses

MINOR COURSES IN MASTER'S PROGRAMME OF ENTOMOLOGY

SEMESTER-I			
1.	STAT 511	STATISTICAL METHODS	3 (2 + 1)
SEMESTER-II			
2.	PPATH- 523	DISEASES OF FIELD AND MEDICINAL CROPS	3 (2 + 1)
SEMESTER-III (student can choose one course out of followings)			
3.	NEMAT 531	NEMATODE DISEASES OF CROPS	3 (2 + 1)
4.	BIOCH-531	PLANT BIOCHEMISTRY	3 (2 + 1)

COMPULSORY NON-CREDIT COURSES (Across Departments)			
1.	PGS 501	LIBRARY AND INFORMATION SERVICES	1 (0 + 1)
2.	PGS 502	TECHNICAL WRITING AND COMMUNICATIONSKILLS	1 (0 + 1)
3.	PGS 503	INTELLECTUAL PROPERTY AND ITS MANAGEMENT IN AGRICULTURE	1 (1 + 0)
4.	PGS 504	BASIC CONCEPTS IN LABORATORY TECHNIQUES	1 (0 + 1)
5.	PGS 505	AGRICULTURAL RESEARCH, RESEARCH ETHICS AND RURAL DEVELOPMENT PROGRAMME (e- Course)	1 (1 + 0)
6.	PGS 506	DISASTER MANAGEMENT	1 (1 + 0)

**ORGANIZATION OF COURSE CONTENTS
&
CREDIT REQUIREMENTS**

Code Numbers

- The code of UG courses have accepted as such as per 5th Dean's committee.
- PG courses are divided into two series: 500-series courses pertain to Master's level, and 600-series to Doctoral level.
- The second numerical digit of course code from left side is designated as number of semester of the programme and third digit is represented the serial number of the course in a semester.

Course Contents

The contents of each course have been organized into:

- Objective – to elucidate the basic purpose.
- Theory units – to facilitate uniform coverage of syllabus for paper setting.
- Suggested Readings – to recommend some standard books as reference material. This does not unequivocally exclude other such reference material that may be recommended according to the advancements and local requirements.

Minimum Credit Requirements

Subject	Master's Programme
Major	27
Minor & Supporting	09
Seminar	01
Research	20
Total Credits	57

Maximum Credit Requirements in a semester should not be more than 24.

Major subject: The subject (department) in which the students takes admission.

Minor subject: The subject closely related to student's major subject (Plant Pathology & Nematology).

Supporting subject: The subject not related to the major subject. It could be any subject considered relevant for student's research work.

Non-Credit Compulsory Courses: Six courses (PGS 501 to PGS 506) are of general nature and are compulsory for Master's programme; Ph. D. students may be exempted from these courses if already studied during Master's degree.

**DEPARTMENT OF ENTOMOLOGY
COLLEGE OF AGRICULTURE, JODHPUR
(AGRICULTURE UNIVERSITY, JODHPUR)**

PROGRAMMES

1. B. Sc. (Hons) Agriculture 2. M. Sc.

COURSE REQUIREMENTS FOR B. Sc. (Hons) Agriculture

Type of course	Course Code
Compulsory courses	ENTO-121, ENTO-311, ENTO-321
Elective Courses	ENTO 221, ENTO-322
Module for Student Ready	ENTO-421, ENTO-422

COURSE REQUIREMENTS FOR M. Sc.

Field of specialization	Insect Pests Management, Morphology and Anatomy, Physiology and Nutrition, Taxonomy, Toxicology, Ecology, Biological Control and Storage
Core courses	ENTO 511, ENTO 513, ENTO 521, ENTO 522
Optional courses	ENTO 512, ENTO523, ENTO 524, ENTO 525, ENTO 526, ENTO 527, ENTO 531, ENTO532, ENTO533, ENTO 534, ENTO 541 (seminar), ENTO 543 (Research)
Minor & supporting courses	STAT 511, PPATH 523, NEMAT 531/ BIOCH-531, or as deemed suitable by advisory committee
Non credit compulsory courses	ENTO 542 (comprehensive) PGS courses
Deficiency courses	Nil or as deemed suitable by advisory committee

Field of specialization Insect Pests Management, Morphology and Anatomy, Physiology and Nutrition, Taxonomy, Toxicology, Ecology, Biological Control and Storage

Postgraduate courses for Master degree

ENTO 511 INSECT MORPHOLOGY AND ANATOMY 3(2+1)

(Core Course)

Objective

To acquaint the students with external morphology and internal systems of the insect's body.

Theory

UNIT I : External Morphology: Insect body wall structure, cuticular outgrowths, colouration and special integumentary structures in insects, body tagmata, sclerites and segmentation.

Head- Origin, structure and modification; types of mouthparts and antennae, tentorium and neck sclerites.

Thorax- Areas and sutures of tergum, sternum and pleuron, pterothorax; Wings: structure and modifications, venation, wing coupling apparatus and mechanism of flight; Legs: structure and modifications.

Abdomen- Segmentation and appendages; Genitalia and their modifications; Embryonic and post-embryonic development; Types of metamorphosis. Insect sense organs (mechano-, photo- and chemoreceptors).

UNIT II : Internal Systems: Structure and modification of different systems- digestive, circulatory, respiratory, excretory, nervous, sensory, reproductive, musculature, and secretory system.

Practical

Preparation of permanent mounts of different body parts and their appendages of taxonomic importance including male and female genitalia. Dissection of digestive, nervous and reproductive systems of different insects.

Suggested Readings

Chapman RF. 1998. The Insects: Structure and Function. Cambridge Univ. Press, Cambridge.

Duntson PA. 2004. The Insects: Structure, Function and Biodiversity. Kalyani Publ., New Delhi.

Evans JW. 2004. Outlines of Agricultural Entomology. Asiatic Publ., New Delhi. Gillott, C. 1995. Entomology, 2nd Ed. Plenum Press, New York, London.

Gullan, P.J. and Cranston, P.S. 2000. The Insects, An Outline of Entomology, 2nd Ed. Blackwell Science, U.K.

Richards OW & Davies RG. 1977. Imm's General Text Book of Entomology. 10th Ed. Chapman & Hall, London.

Snodgrass RE. 1993. Principles of Insect Morphology. Cornell Univ. Press, Ithaca. Tembore, D.B. 2000. Modern Entomology, Himalaya Publishing House, Mumbai.

Objective

To teach the students the concepts of ecology, basic principles of distribution and abundance of organisms and their causes. Study life tables, organization of communities, diversity indices. Train students in sampling methodology, calculation of diversity indices, constructing life tables, relating insect population fluctuations to biotic and/or abiotic causes.

Theory

UNIT I :History and Definition. Basic Concepts. Organisation of the Biological world. Plato's Natural Balance vs Ecological Dynamics as the modern view. Abundance and diversity of insects, Estimates and Causal factors. Study of abundance and distribution and relation between the two. Basic principles of abiotic factors and their generalised action on insects. Implications for abundance and distribution of organisms including insects- Law of the Minimum, Law of Tolerance, and biocoenosis, Systems approach to ecology.

UNIT II :Basic concepts of abundance- Model vs Real world. Population growth basic models – Exponential vs Logistic models. Discrete vs Continuous growth models. Concepts of Carrying capacity, Environmental Resistance and Optimal yield. Vital Statistics- Life Tables and their application to insect biology. Survivorship curves. Case studies of insect life tables. Population dynamics- Factors affecting abundance- Environmental factors, dispersal and migration, Seasonality in insects. Classification and mechanisms of achieving different seasonality- Diapause (Quiescence) - aestivation, hibernation.

UNIT III :Biotic factors- Food as a limiting factor for distribution and abundance, Nutritional Ecology. Food chain- web and ecological succession. Interspecific interactions- Basic factors governing the interspecific interactions- Classification of interspecific interactions - The argument of cost-benefit ratios. Competition- Lotka-Volterra model, Concept of niche ecological homologues, competitive exclusion. Evolution of mimicry, colouration, concept of predator satiation; evolution of life history strategies.

UNIT IV :Community ecology- Concept of guild, Organisation of communities- Hutchinson Ratio, May's d/w, Relation between the two and their association with Dyar's Law and Przibram's law. Relative distribution of organisms, Concept of diversity- the Wallacian view. Assessment of diversity. Diversity-stability debate, relevance to pest management. Pest management as applied ecology.

Practical

Types of distributions of organisms. Methods of sampling insects, estimation of densities of insects and understanding the distribution parameters- Measures of central tendencies, Poisson Distribution, Negative Binomial Distribution. Determination of optimal sample size. Learning to fit basic population growth models and testing the goodness of fit. Fitting Holling's Disc equation, Assessment of prey-predator densities from natural systems and understanding the correlation between the two. Assessing and describing niche of some insects of a single guild. Calculation of niche breadth, activity breadth and diagrammatic representation of niches of organisms. Calculation of diversity indices- Shannon's, Simpson's and Avalanche Index and understanding their associations and parameters that affect their values. Problem solving in ecology. Field visits to understand different ecosystems and to study insect occurrence in these systems. Case studies of insect life tables.

ENTO 513 PRINCIPLES OF INTEGRATED PEST MANAGEMENT 3 (2+1)

(Core Course)

Objective

To familiarize the students with principles of insect pest management, including concept and philosophy of IPM. Train students in computation of ETL, implementing IPM programmes.

Theory

UNIT I :History and origin, definition and evolution of various related terminologies. Importance of resistance, principles, classification, components, types and mechanisms of resistance.

UNIT II :Concept and philosophy, ecological principles, economic threshold concept, and economic consideration. Insect-host plant relationships; theories and basis of host plant selection in phytophagous insects.

UNIT III : Tools of pest management and their integration- legislative, cultural, physical and mechanical methods; pest survey and surveillance, forecasting, types of surveys including remote sensing methods, factors affecting surveys; political, social and legal implications of IPM; pest risk analysis; pesticide risk analysis; cost-benefit ratios and partial budgeting; case studies of successful IPM programmes.

Practical :

Characterization of agro-ecosystems; sampling methods and factors affecting sampling; population estimation methods; crop loss assessment direct losses, indirect losses, potential losses, avoidable losses, unavoidable losses. Computation of EIL and ETL; crop modeling; designing and implementing IPM system. Screening techniques; breeding for insect resistance in crop plants; exploitation of wild plant species; gene transfer, successful examples of resistant crop varieties in India and world.

Suggested Readings

- Dhaliwal GS & Arora R. 2003. Integrated Pest Management – Concepts and Approaches. Kalyani Publ., New Delhi.
- Flint MC & Bosch RV. 1981. Introduction to Integrated Pest Management. 1st Ed., Springer, New York.
- Horowitz AR & Ishaaya I. 2004. Insect Pest Management: Field and Protected Crops. Springer, New Delhi.
- Ignacimuthu SS & Jayaraj S. 2007. Biotechnology and Insect Pest Management. Elite Publ., New Delhi.
- Metcalf RL & Luckman WH. 1982. Introduction of Insect Pest Management. John Wiley & Sons, New York.
- Pedigo RL. 2002. Entomology and Pest Management. 4th Ed. Prentice Hall, New Delhi.
- Norris RF, Caswell-Chen EP & Kogan M. 2002. Concepts in Integrated Pest Management. Prentice Hall, New Delhi.
- Subramanyam B & Hagstrum DW. 1995. Integrated Management of Insects in Stored Products. Marcel Dekker, New York.

(Core Course)**Objective**

To sensitize the students on the theory and practice of classifying organisms (with special reference to animals) and the rules governing the same. To introduce the students to the classification of insects up to the level of families with hands-on experience in identifying the families of insects.

Theory

UNIT I: Introduction to the history and principles of systematics and its importance. Brief evolutionary history of Insects- introduction to phylogeny of insects and Major Classification of Superclass Hexapoda – Classes – Ellipura (Collembola, Protura), Diplura and Insecta- and the Orders contained. International Code of Zoological Nomenclature, its brief explanation and uses.

UNIT II: Distinguishing characters, general biology, habits and habitats of insect orders and economically important families contained in them. Class Insecta: Subclass- Apterygota – Collembola, Protura, Diplura Archaeognatha, Thysanura. Subclass: Pterygota- different orders of exopterygota, Division Palaeoptera – Odonata and Ephemeroptera. Division: Neoptera: Subdivision: Orthopteroid and Blattoid Orders (=Oligoneoptera: Plecoptera, Blattodea, Isoptera, Mantodea, Grylloblattodea, Dermaptera, Orthoptera, Phasmatodea, Mantophasmatodea, Embioptera, Zoraptera), Subdivision: Hemipteroid Orders (=Paraneoptera): Psocoptera, Phthiraptera, Thysanoptera and Hemiptera.

UNIT III: Distinguishing characters, general biology, habits and habitats of insect orders and economically important families contained in them (Continued). Division Neoptera– Subdivision Endopterygota, Section Neuropteroid- Coleopteroid Orders: Strepsiptera, Megaloptera, Raphidioptera, Neuroptera and Coleoptera, Section Panorpid Orders Mecoptera, Siphonaptera, Diptera, Trichoptera, Lepidoptera, and Section Hymenopteroid Orders: Hymenoptera.

Practical

Study of Orders of insects and their identification using taxonomic keys. Keying out families of insects of different major Orders: Odonata, Orthoptera, Blattodea, Mantodea, Isoptera, Hemiptera, Thysanoptera, Phthiraptera, Neuroptera, Coleoptera, Diptera, Lepidoptera and Hymenoptera. Field visits to collect insects of different orders.

- David BV and Ananthkrishanan TN. 2004. General and Applied Entomology. McGraw Hill

(Core Course)

Objective

To impart knowledge to the students about physiology of different systems, nutritional physiology and their application in entomology.

Theory

UNIT I :Scope and importance of insect physiology; physiology of integument, moulting; growth, metamorphosis and diapause. Mechanism of digestion, circulation, respiration, excretion, and impulse transmission in the insects. Physiology of reproductive and secretory systems.

UNIT II :Importance of insect nutrition- role of vitamins, proteins, amino acids, carbohydrates, lipids, minerals and other food constituents; extra and intra-cellular microorganisms and their role in physiology; artificial diets.

Practical

Chromatographic analysis of free amino acids of haemolymph; determination of chitin in insect cuticle; examination of insect haemocytes; preparation and evaluation of various diets; consumption, utilization and digestion of natural and artificial diets.

Suggested Readings

Chapman RF.1998. Insects: Structure and Function. ELBS Ed., London.

Duntson PA. 2004. The Insects: Structure, Function and Biodiversity. Kalyani Publ., New Delhi.

Gullan, P.J. and Cranston, P.S. 2000. The Insects: An Outline of Entomology, 2nd Ed. Blackwell Science, U.K.

Kerkut GA & Gilbert LI. 1985. Comprehensive Insect Physiology, Biochemistry and Pharmacology. Vols. I- XIII. Pergamon Press, New York.

Patnaik BD. 2002. Physiology of Insects. Dominant, New Delhi.

Richards OW & Davies RG. 1977. Imm's General Text Book of Entomology. 10th Ed. Vol. 1. Structure, Physiology and Development. Chapman & Hall, New York.

Wigglesworth VB.1984. Insect Physiology. 8th Ed. Chapman & Hall, New York.

Pant NC and Ghai S. 1981. Insect Physiology and Anatomy. ICAR Publication.

Objective

To orient the students with structure and mode of action of important insecticides belonging to different groups, development of resistance to insecticides by insects, environmental pollution caused by toxic insecticides and their toxicological aspects.

Theory

UNIT I :Definition and scope of insecticide toxicology; history of chemical control; pesticide use and pesticide industry in India.

UNIT II :Classification of insecticides and acaricides based on mode of entry, mode of action, based on IRAC and chemical nature. Structure and mode of action of organochlorines, organophosphates, carbamates, pyrethroids, tertiary amines, neonicotinoids, oxadiazines, phenyl pyrozoles, insect growth regulators, microbials, botanicals, new promising compounds, etc.

UNIT III :Principles of toxicology; evaluation of insecticide toxicity; joint action of insecticides-synergism, potentiation and antagonism; factors affecting toxicity of insecticides; insecticide compatibility, selectivity and phytotoxicity.

UNIT IV :Insecticide metabolism; insect-pest resistance to insecticides; mechanisms and types of resistance; insecticide resistance management and pest resurgence.

UNIT V :Insecticide residues, their significance and environmental implications. Insecticide Act, registration and quality control of insecticides; safe use of insecticides; diagnosis and treatment of insecticide poisoning.

Practical

Insecticide formulations and mixtures; laboratory and field evaluation of bioefficacy of insecticides; bioassay techniques; probit analysis; evaluation of insecticide toxicity. Toxicity to beneficial insects. Pesticide appliances. Working out doses and concentrations of pesticides.

Suggested Readings

Chattopadhyay SB. 1985. Principles and Procedures of Plant Protection. Oxford & IBH, New Delhi.

Gupta HCL.1999. Insecticides: Toxicology and Uses. Agrotech Publ., Udaipur.

Ishaaya I & Degheele (Eds.). 1998. Insecticides with Novel Modes of Action. Narosa Publ. House, New Delhi.

Matsumura F. 1985. Toxicology of Insecticides. Plenum Press, New York.

Perry AS, Yamamoto I, Ishaaya I & Perry R. 1998. Insecticides in Agriculture and Environment. Narosa Publ. House, New Delhi.

Prakash A & Rao J. 1997. Botanical Pesticides in Agriculture. Lewis Publ., New York.

Srivastava RP and Saxena RC. 2000. A ext book of insect toxicology. Himanshu Publication

Objective

To familiarize the students about nature of damage and seasonal incidence of insect pests that cause loss to major field crops and their effective management by different methods.

Theory

Systematic position, identification, distribution, host-range, bionomics, nature and extent of damage, seasonal abundance and management of insect and mite pests and vectors.

UNIT I :Insect pests of cereals and millets and their management. Polyphagous pests: grasshoppers, locusts, termites, white grubs, hairy caterpillars, and non-insect pests (mites, birds, rodents, snails, slugs and mammalian etc.).

UNIT II :Insect pests of pulses, tobacco, oilseeds and their management.

UNIT III :Insect pests of fibre crops, forages, sugarcane and their management.

UNIT IV: Pests of stored grains and their management

Practical

Visits of fields and warehouses/godowns, collection and identification of important pests and their natural enemies; detection and estimation of infestation and losses in different crops and stored grain; study of life history of important insect pests.

Suggested Readings

- Atwal AS, Dhaliwal GS & David BV. 2001. Elements of Economic Entomology. Popular Book Depot, Chennai.
- Dhaliwal GS, Singh R & Chhillar BS. 2006. Essentials of Agricultural Entomology. Kalyani Publ., New Delhi.

- Bhargava MC and Kumawat KC. 2010. Pests of stored grains and their management. New India Publishing Agency, New Delhi.

Objective

To acquaint the students with external morphology of different groups of mites, train in identification of commonly occurring families of plant associated mites, provide information about important mite pests of crops and their management. To impart knowledge about the different groups of arthropods found in soil, interaction between the different groups, and role of soil arthropods in humus formation. Hands-on training in sampling and identification of different groups of soil arthropods.

Theory

UNIT I :History of Acarology; importance of mites as a group; habitat, collection and preservation of mites. Soil arthropods and their classification, habitats and their identification.

UNIT II :Introduction to morphology and biology of mites and ticks. Broad classification- major orders and important families of Acari including diagnostic characteristics. Estimation of populations; sampling and extraction methods for soil arthropods.

UNIT III :Economic importance, seasonal occurrence, nature of damage, host range of mite pests of different crops, mite pests in polyhouses, mite pests of stored products and honeybees. Management of mites using acaricides, phytoseiid predators, fungal pathogens etc. Culturing of phytophagous, parasitic and predatory mites. Role of soil arthropods in detritus feeding, litter breakdown and humus formation. Soil arthropods as bio-indicators of habitat qualities. Effect of soil arthropod activity on soil properties.

Practical

Collection of mites from plants, soil and animals; extraction of mites from soil, plants and stored products; preparation of mounting media and slide mounts; external morphology of mites; identification of mites up to family level using keys; studying different rearing techniques for mites. Sampling, extraction methods and identification of various types of soil fauna; estimation and assessment of soil arthropod population; techniques and culturing soil invertebrates.

Suggested Readings

Objective

To acquaint the learners about the principles and the role of Plant Quarantine in containment of pests and diseases, plant quarantine regulations and set-up.

Theory

UNIT I :Definition of pest, pesticides and transgenics as per Govt. notification; relative importance; quarantine – domestic and international. Quarantine restrictions in the movement of agricultural produce, seeds and planting material; case histories of exotic pests/diseases and their status.

UNIT II :Plant protection organization in India. Acts related to registration of pesticides and transgenics. History of quarantine legislations, PQ Order 2003. Environmental Acts, Industrial registration; APEDA, Import and Export of bio-control agents.

UNIT III :Identification of pest/disease free areas; contamination of food with toxigens, microorganisms and their elimination; Symptomatic diagnosis and other techniques to detect pest/pathogen infestations; VHT and other safer techniques of disinfestation/salvaging of infected material.

UNIT IV :WTO regulations; non-tariff barriers; Pest risk analysis, good laboratory practices for pesticide laboratories; pesticide industry; Sanitary and Phytosanitary measures.

Suggested Readings

Rajeev K & Mukherjee RC. 1996. Role of Plant Quarantine in IPM. Aditya Books.

Rhower GG. 1991. Regulatory Plant Pest Management. In: Handbook of Pest Management in Agriculture. 2nd Ed. Vol. II. (Ed. David Pimental). CRC Press.

#course shall be conducted jointly with the services of a Plant Pathology Expert

Objective

To teach the students about the different groups of insects that vector plant pathogens, vector-plant pathogen interaction, management of vectors for controlling diseases.

Theory

UNIT I :History of developments in the area of insects as vectors of plant pathogens. Important insect vectors and their characteristics; mouth parts and feeding processes of important insect vectors. Efficiency of transmission.

UNIT II :Transmission of plant viruses and fungal pathogens. Relation between viruses and their vectors.

UNIT III :Transmission of plant viruses by aphids, whiteflies, mealy bugs and thrips.

UNIT IV :Transmission of mycoplasma and bacteria by leaf hoppers and plant hoppers.

UNIT V :Transmission of plant viruses by psyllids, beetles and mites. Epidemiology and management of insect transmitted diseases through vector management.

Practical

Identification of common vectors of plant pathogens- aphids, leafhoppers, whiteflies, thrips, beetles, nematodes; culturing and handling of vectors; demonstration of virus transmission through vectors-aphids, leafhoppers and whiteflies.

Suggested Readings

Basu AN. 1995. Bemisiatabaci (Gennadius) - Crop Pest and Principal Whitefly Vector of Plant Viruses. Oxford & IBH, New Delhi.

Harris KF & Maramorosch K. (Eds.).1980. Vectors of Plant Pathogens. Academic Press, London.

Maramorosch K & Harris KF. (Eds.). 1979. Leafhopper Vectors and Plant Disease Agents. Academic Press, London.

Youdeovei A & Service MW. 1983. Pest and Vector Management in the Tropics. English Language Books Series, Longman, London.

Objective

To impart knowledge on major pests of horticultural and plantation crops regarding the extent and nature of loss, seasonal history, their integrated management.

Theory

Systematic position, identification, distribution, host range, bionomics and seasonal abundance, nature and extent of damage and management of insect pests of various crops.

UNIT I :Fruit Crops- mango, guava, banana, jack, papaya, pomegranate, litchi, grapes, ber, fig, citrus, aonla, pineapple, apple, peach and other temperate fruits.

UNIT II :Vegetable crops- tomato, potato, , radish, carrot, beetroot, cole crops, French beans, chow-chow, brinjal, okra, all cucurbits, drumstick, leafy vegetables etc.

UNIT III :Plantation crop- coffee, tea, rubber, coconut, arecanut, cashew, cocoa, henna, datepalm etc.; Spices and Condiments- pepper, cardamom, clove, nutmeg, chillies, turmeric, Onion, garlic, ginger, beetlevine; Seed spices- cumin, fenugreek, coriander, fennel, etc.

UNIT IV :Ornamental, medicinal and aromatic plants and pests in polyhouses/protected cultivation.

Practical

Collection and identification of important pests and their natural enemies on different crops; study of life history of important insect pests and mites.

Suggested Readings

- Verma LR, Verma AK & Goutham DC. 2004. Pest Management in Horticulture Crops: Principles and Practices. Asiatech Publ., New Delhi.

Objective

To train the students with theory and practice of biological control, mass production techniques and field evaluation of various biological control agents like parasitoids, predators and various entomopathogenic microorganisms.

Theory

UNIT I :History, principles and scope of biological control; important groups of parasitoids, predators and pathogens; principles of classical biological control- importation, augmentation and conservation. History of insect pathology, infection of insects by bacteria, fungi, viruses, protozoa, rickettsiae and nematodes.

UNIT II :Biology, adaptation, host seeking behaviour of predatory and parasitic groups of insects. Role of insect pathogenic nematodes, viruses, bacteria, fungi, protozoa etc., their mode of action. Biological control of weeds using insects. Symptomatology and etiology of diseases caused by the above and the factors controlling these. Defense mechanisms in insects against pathogens.

UNIT III :Mass production of quality biocontrol agents- techniques, formulations, economics, field release/application and evaluation.

UNIT IV :Successful biological control projects, analysis, trends and future possibilities of biological control. Importation of natural enemies- Quarantine regulations, biotechnology in biological control. Semiochemicals in biological control.

Practical

Identification of common natural enemies of crop pests (parasitoids, predators, microbes) and weed killers. Visits to bio-control laboratories to learn rearing and mass production of egg, egg-larval, larval, larval-pupal and pupal parasitoids, common predators, microbes and their laboratory hosts, phytophagous natural enemies of weeds. Field collection of parasitoids and predators. Hands-on training in culturing, identification of common insect pathogens. Quality control and registration standards for biocontrol agents.

Objective

To focus on requirement and importance of grain and grain storage, to understand the role of stored grain pests and to acquaint with various stored grain pest management techniques for avoiding losses in storage.

Theory

UNIT I :Introduction, history of storage entomology, concepts of storage entomology and significance of insect pests. Post-harvest losses in toto visà- vis total production of food grains in India. Scientific and socio-economic factors responsible for grain losses.

UNIT II :Important pests namely insects, mites, rodents, birds and microorganisms associated with stored grain and field conditions including agricultural products; traditional storage structures; association of stored grain insects with fungi and mites, their systematic position, identification, distribution, host range, biology, nature and extent of damage, role of field and cross infestations and natural enemies, type of losses in stored grains and their effect on quality including biochemical changes.

UNIT III :Ecology of insect pests of stored commodities/grains with special emphasis on role of moisture, temperature and humidity in safe storage of food grains and commodities. Stored grain deterioration process, physical and biochemical changes and consequences. Grain storage- types of storage structures i.e., traditional, improved and modern storage structures in current usage. Ideal seeds and commodities' storage conditions.

UNIT IV :Important rodent pests associated with stored grains and their non-chemical and chemical control including fumigation of rat burrows. Role of bird pests and their management. Control of infestation by insect pests, mites and microorganisms. Preventive measures- Hygiene/sanitation, disinfestations of stores/receptacles, legal methods. Curative measures- Non-chemical control measures- ecological, mechanical, physical, cultural, biological and engineering. Chemical control- prophylactic and curative- Characteristics of pesticides, their use and precautions in their handling with special emphasis on fumigants. Integrated approaches to stored grain pest management.

Practical

Collection, identification and familiarization with the stored grains/seed insect pests and nature of damage caused by them; detection of insect infestation in stored food grains; estimation of losses in stored food grains; determination of moisture content in stored food grains; familiarization of storage structures, demonstration of preventive and curative measures including fumigation techniques; treatment of packing materials and their effect on seed quality. Field visits to save grain campaign, central warehouse and FCI warehouses and institutions engaged in research or practice of grain storage like CFTRI, IGSMRI, Hapur etc. (only where logistically feasible).

Subramanyam B &Hagstrum DW. 1995. Interrelated Management of Insects in Stored Products. Marcel Dekker, New York.

Objective

To familiarize the students with entrepreneurial opportunities in entomology, provide information on productive insects and their products, as well as insect pests of public health and veterinary importance and their management.

Theory

UNIT I : Bee keeping- General colony management during different seasons. Seasonal management. Managing colonies for honey production and pollination. Artificial queen rearing. Pests and diseases of honey bees. Bee poisoning. Production and marketing of quality honey and value added honey products. Establishment and maintenance of apiaries.

UNIT II: Study of different species of silkworms, characteristic features, moriculture, silk and its uses, pests and diseases of silkworms, rearing and management of silkworms. Lac insect- natural enemies and their management.

UNIT III: Economic and public health importance of insect pests in human habitation and habitats, biology, damage and control of mosquitoes, houseflies, bed bugs, ants, termites, cockroaches, flies, silverfish, head and body lice, carpet beetles, cloth moths, crickets, wasps, house dust mites, insect pests of cattle, poultry, pet animals and their management.

UNIT IV: Principles and methods of pest management in residential places and public buildings, insecticides for domestic use and their safety, pre- and post construction termite proofing of buildings, appliances for domestic pest control. Rodent control methods. Organic methods of domestic pest management.

Practical

Assessing pest status in dwellings (labs, canteen or hostel), implementation of pest control against flies, mosquitoes, bed bugs, cockroaches and rodents. Pre- and post-construction termite proofing methods, control of silverfishes in the library. Visit to poultry units and assessing pest status in poultry. Evaluation of commercially available domestic insect pest control products through bioassays. Identification of honey bee species, bee castes and special adaptations, identification and handling of bee-keeping equipments. Handling of honey bees-hive and frame inspection. Honey extraction and processing methods of hive products extraction. Preparation of bee-keeping projects for funding. Visit to bee nursery and commercial apiaries. Silkworm rearing and management. Lac host and crop management technology and processing of lac. Products and by-products of lac.
